New Sod Prep

This program focuses on what to put down BEFORE you lay sod, or have sod laid. Amending the soil prior to sod install is a key step that many people miss. This extra step will allow your sod to thrive after it is laid.

Milorganite 6-4-0 8 Pounds per 1,000 Sq. Ft.

Milorganite is a great slow-release fertilizer that will slowly feed the turf. We always say Milorganite is like yogurt for your soil.

NuHumic WDG 1.5 LBS per 1,000 Sq. Ft.

NuHumic WDG is a humic acid soil conditioner that will improve soil structure, increase CEC, and improve nutrient uptake by the turf.

Caravan G 2 LBS per 1,000 Sq. Ft.

Insects and fungus can be detrimental to new sod, and that is why Caravan G is a key step when laying new sod. As a combo insecticide/fungicide, Caravan G will systemically defend against various insects and diseases.
