Low Burn WS Spray

As an applicator or turf manager, it can be tricky to spray for weeds, and not burn the turf. Often times, herbicides have carriers that can potentially cause burning, especially when applying blanket applications. This program offers a low burn potential for warm season grasses like St. Augustine and Bermuda.

Loyalty WDG 2.6 – 8 dry OZ per acre

This dry formulation of Sulfentrazone will selectively control a myriad of broadleaf, grassy-type weeds, and sedges. It boasts low use rates, can be effectively tank mixed, and has a low burn potential compared to other liquid Sulfentrazone products.

LiquiPlex Bonder 1-0-0 16-64 OZ per acre

Containing amino acids derived from yeast extracts, this very low NPK formulation helps the turf recover from any herbicide stress.

Miller's Spray Aide 1 PT per 100 GL

This utility adjuvant system boasts four duties in one; spreader, buffer/acidifier, compatibility agent, and spray tank/line/nozzle/tip cleaner.
