## Mango Tango

Mangoes are a delicious tropical fruit that we can grow well here in Florida. With that being said, mangoes encounter a fair amount of issues, especially anthracnose (disease). Using the products below, you can grow an outstanding mango crop, whether at home or in the field.

### Cytokin **Foliar 1-2 PTS per acre**

Cytokin will aid in fruit set. This will happen after fertilization when the plant switches to fruit formation and growth. Cytokin contains growth hormones that aid in cell division and enlargement, which will maximize fruit set.

### Manzate Pro Stik **Foliar spray @ 2-2.5 LBS per acre**

Use Manzate Pro Stik to combat anthracnose, fruit rot, and black spot during the growing season. Use this on 14-21 day intervals.

### Soar Micro **Foliar spray @ 3-4 QTS per acre**

Mangoes desire specific micronutrients throughout the growing cycle. Soar Micro contains all of these elements, and also sea kelp and humic acid. All of which will aid in development. Use this at least three times throughout the growing season.

## Mango Tango

### Cell Force 3-0-0 Foliar @ 1-2 PTS per acre

Mangoes often encounter calcium deficiencies which will affect the fruit, and it's quality, taste, and firmness. Cell Force 3-0-0 will provide plant-available calcium to combat this. Use Cell Force pre-bloom, and then monthly up to harvest.

### No Fly Bioinsecticide Foliar spray @ ½ OZ per GL every 5-7 days

This excellent, organic mycoinsecticide will protect you from insects that want to destroy your crops; thrips, mealybugs, white flies, and more. And best of all, it is OMRI listed!
