Florida LCO Irrigation Efficiency

As an LCO or PCO, you deal with many issues on a day-to-day basis. A lot of times, you are dealing with irrigation issues on lawns, meaning hot spots, poor coverage, etc. Many times, you can't fix this, and it is out of your scope. Use this guide to maximize your customers water usage, and moisture control by using wetting agents and other important products.

Flite Flow Complete **4 OZ per GL**

This is a wetting agent designed to increase water distribution and penetration. Use this in a maintenance application as much as you can, especially during drought and dry periods to combat hot spots, dry spots, and poor irrigation coverage.

Optional Additions

Earthstrong Cadabra **3 OZ per GL / 1 GL per acre**

Cadabra is a carboxylic acid formulation that aids in flushing salts from the soil. If you are dealing with sodium issues, then this would be a good accompaniment to the wetting agent.

Soar Micronutrient Mix **1 OZ per GL**

Soar Micro is an excellent micronutrient mix that is rich in essential micronutrients like Iron, as well as humic acid and sea kelp.
